

With the WINS Academy Elective for Executive Managers, I learned a lot. Surely security is not one subject that can be isolated. Security is not only guards and guns, it shall always be considered part of an integrated security programme for business success. Taking the Elective course and getting the certification will surely benefit our career, but most importantly it helps us better contribute to our organisations' daily operations and communications.

Lijun Liu,

FOCUS ON

RELEASE OF THE WINS ACADEMY MODULE ON COMMUNICATING WITH CIVIL SOCIETY

WINS is delighted to announce the release of its latest WINS Academy Elective Module which focuses on Communicating with Civil Society. The support of such stakeholders, including journalists, politicians and community leaders, is necessary for the successful development and use of nuclear and radioactive materials – whether in industry, medicine or agriculture. When community members trust the organisation and its leaders, the support they provide can be invaluable. However, when distrust and conflict are the norm, protests, negative media coverage, lawsuits and the like can harm an organisation's reputation, financial performance, and ability to conduct business. Moreover, supportive statements from a third party always carry more weight with the media than anything from the industry itself. This course is [available for purchase here](#). For more information, please [visit our website](#).

"I SUPPORT CERTIFICATION" - WORDS FROM ACADEMY GRADUATES

"I found the WINS Certification process to be organised, the communication was good, going through Pearson VUE added to the credibility, and as far as certification goes it really is needed for nuclear security". Edward Waller [Canada], Graduate in Science and Engineering for Nuclear Security since April 2015.

RECENT WINS WORKSHOP

Over 35 participants took part in the WINS Workshop on Alternative Technologies to High Radioactive Sources used in Medical Applications which was held in Brazil on April 28 and 29, 2015. This workshop aimed to develop a common understanding of the importance of risk reduction by means of alternative technologies, to review available options to replace sources, and to share the experience of manufacturers, medical institutions and research organisations in developing and using alternative technologies in order to identify good practices. The event was very positively evaluated by participants. More information can be found in [your Members Area](#).

56th ANNUAL MEETING OF THE INMM

WINS will attend the *56th Annual Meeting of the Institute for Nuclear Materials Management* on July 12-16 in Indian Wells, United States. We hope to see many of you at the WINS booth and during our presentations. More information to follow soon.
